Orders grew fast, but late deliveries spiked twice and only 3% of customers order again

Delivered orders, Jan 2017 to Aug 2018

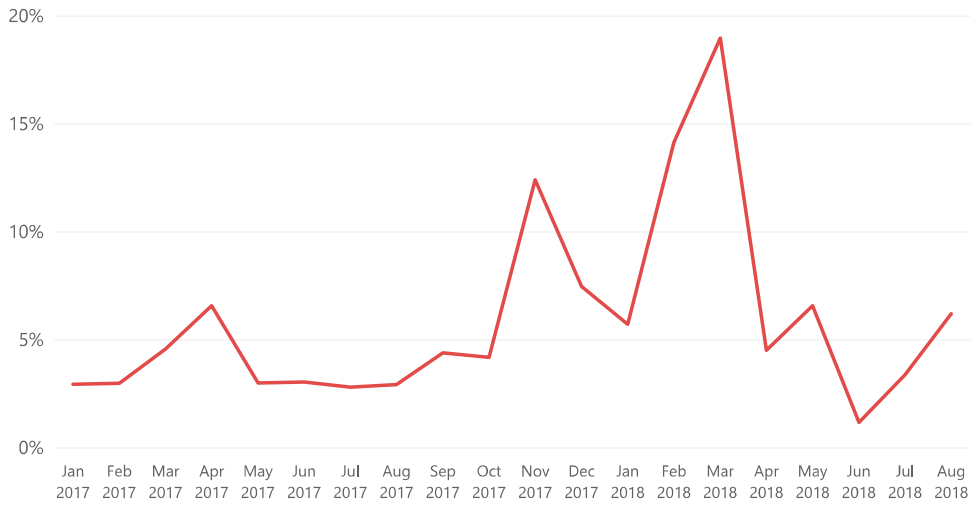

Orders	Order value (R$)	Late %	Avg Score	Rated 1-2 stars %	Repeat in 6 months %
96,203	15.37M	6.8%	4.16	12.8%	3.1%

Customer State: All

Monthly Orders

Late % by Month

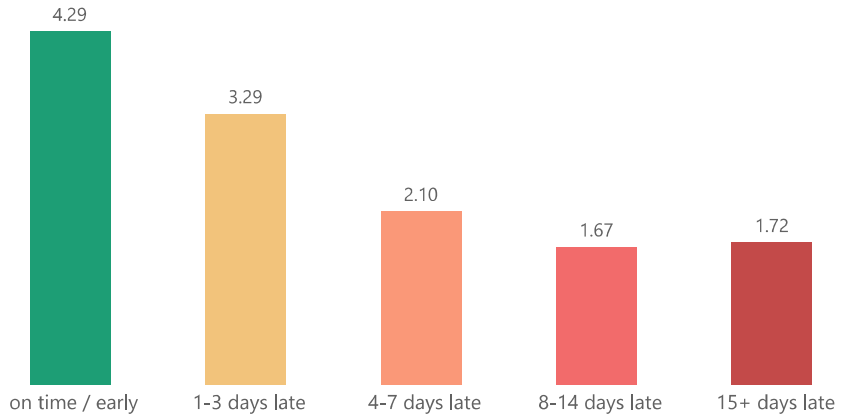

What this means:

- Monthly orders grew from about 750 in Jan 2017 to about 7,300 in Nov 2017, then held at roughly 6,000-7,000 a month through 2018. That makes 96,203 orders over 20 months.
- Late deliveries are usually under 7% of orders, but spiked to 12.4% in Nov 2017 and 19.0% in Mar 2018. Overall, 6.8% of orders arrived late.
- Order value was R$15.37M with an average rating of 4.16, but 12.8% of orders were rated 1-2 stars.
- Only 3.1% of customers placed a second order within 6 months of their first. The next pages look at what drives late deliveries and low ratings.

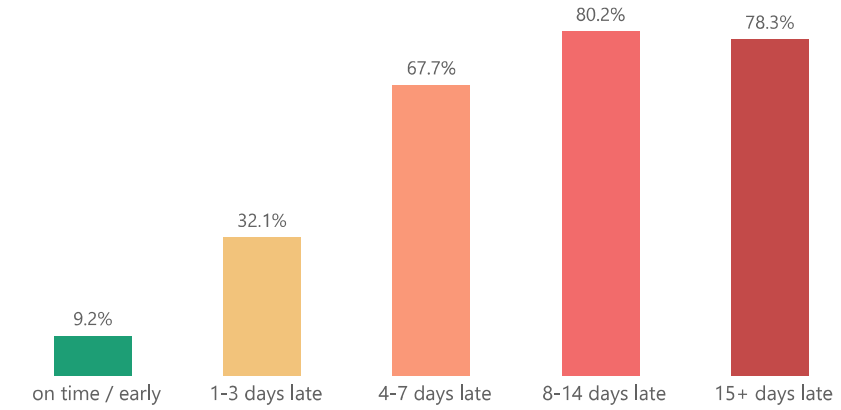

A missed delivery date hurts far more than a slow delivery

Customer State: All

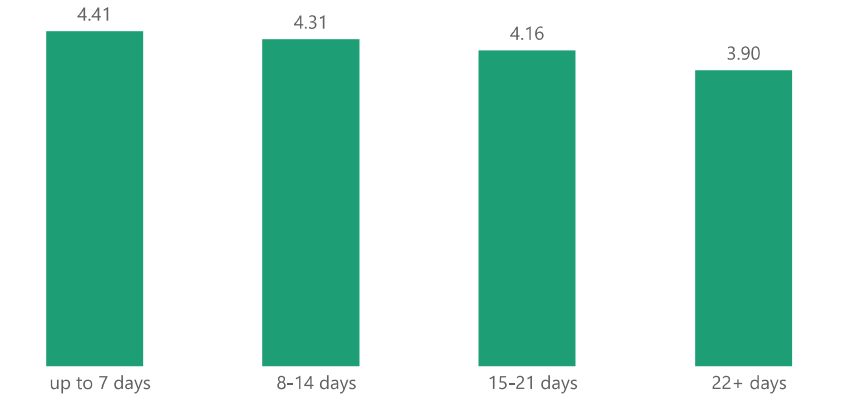

Average rating by days vs promised date

% of orders rated 1-2 stars

On-time orders only: even a 22+ day wait scores 3.9

Delivery Status	Orders	Avg Score	Low Score %	Order Value
On time	89,672	4.29	9.2%	14,221,191
Late	6,531	2.27	62.4%	1,150,550
Total	**96,203**	**4.16**	**12.8%**	**15,371,741**

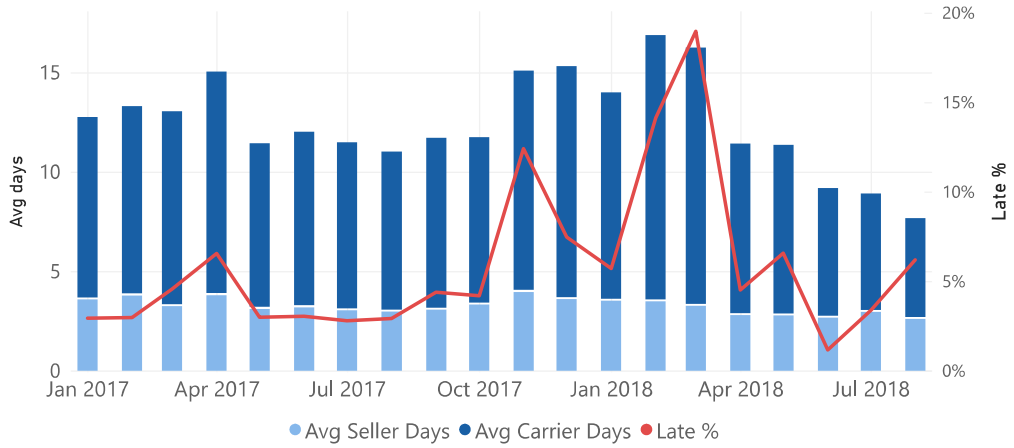

What this means:

- Even 1-3 days late costs a full star (4.29 to 3.29).
- The damage stops growing after about 8 days, with ratings bottoming out around 1.7.
- On-time orders that took 22+ days still rate 3.9, so the promised date matters more than the speed.

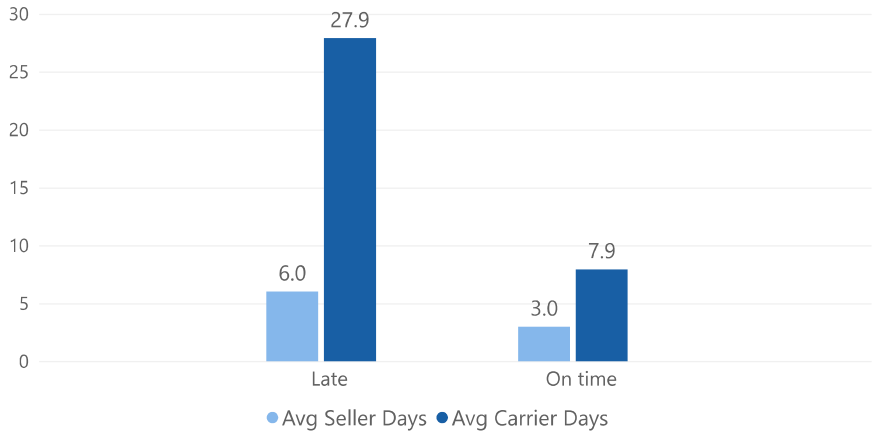

Late spikes follow carrier transit, not seller handling

Customer State
All

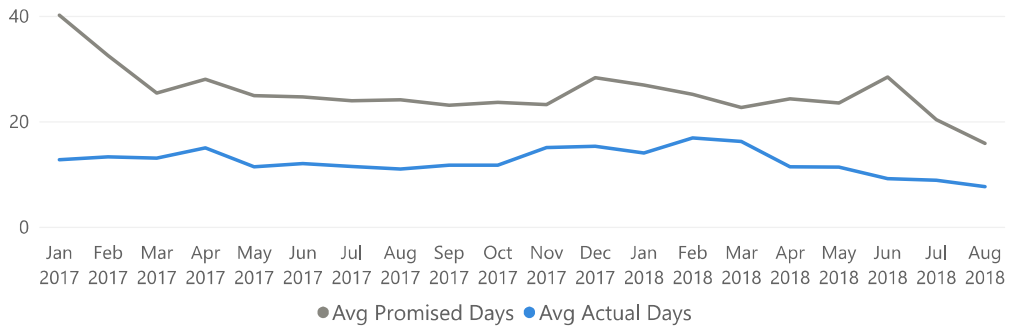

Carrier transit and late % rise together

Where the days go

Promised vs actual delivery days

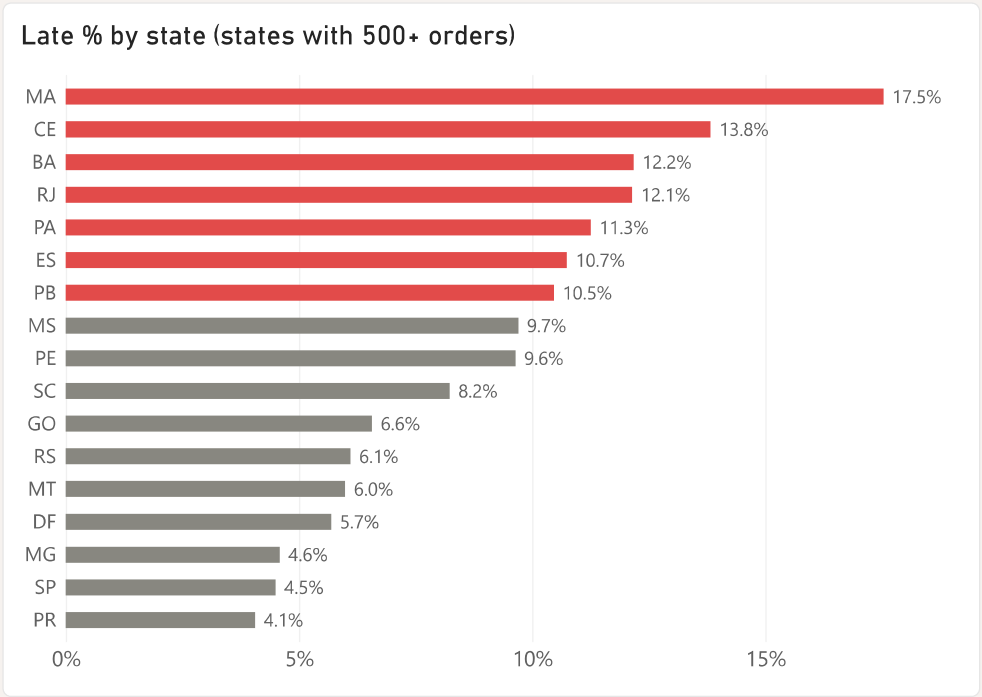

Share of late-order extra delay that is carrier transit

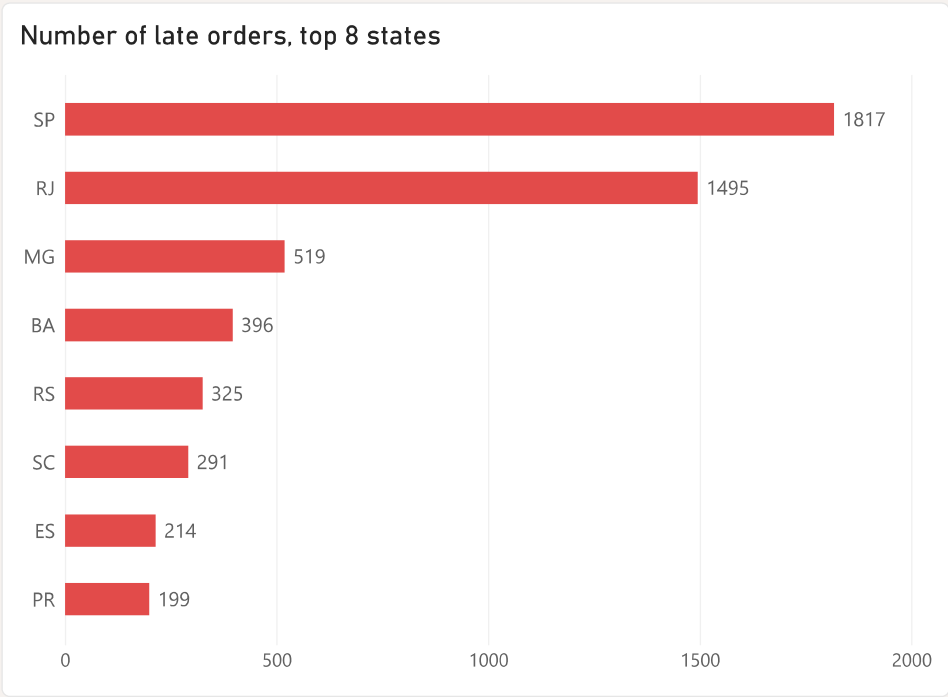

87%

What this means:

- Late orders spend about 28 days with the carrier vs 8 for on-time orders.
- Seller handling adds only about 3 days.
- The late spikes in Nov 2017 and Feb-Mar 2018 follow carrier transit.
- Nov 2017 matches a volume surge, but Feb-Mar 2018 doesn't, and this data can't explain why.

RJ and the northeast run 2-4x São Paulo's late rate

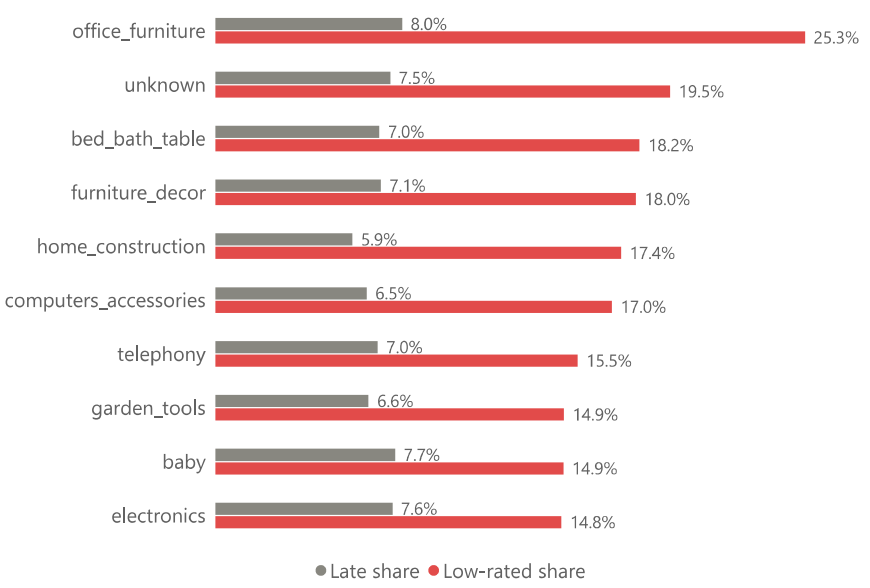

What this means:

- RJ has a 12.1% late rate vs 4.5% in São Paulo, and accounts for 23% of all late orders.
- MA, CE and BA run 12-17.5% late but are smaller markets.
- São Paulo has the most late orders only because it is the biggest market.
- A fix in RJ would have the largest impact.

Worst-rated categories are not late-delivery problems

Low-rating share vs late share, top 10 categories

What this means:

- Office furniture has the most low ratings (25%), but its late rate (8%) is close to the 6.8% average.
- Bed/bath/table and furniture/decor show the same pattern at about 18%, so these look like product or listing problems, not delivery problems.
- 21 flagged sellers handle 1.8% of orders but cause 4.9% of low ratings, which is worth a review but a small lever.

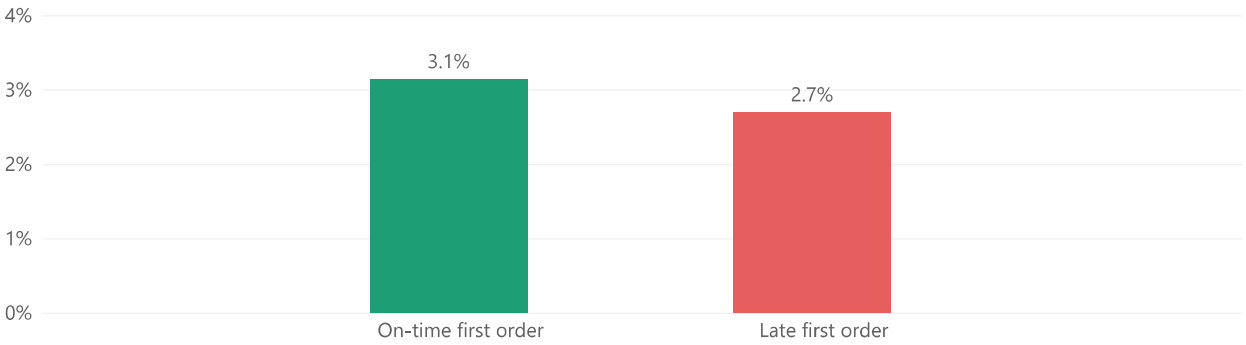

Flagged Sellers	Flagged sellers' share of all orders	Flagged sellers' share of low-rated orders
21	1.8%	4.9%

The 21 flagged sellers (30+ orders, 30%+ low-rated)

Fix carrier delays first; retention needs its own plan

Repeat purchase within 180 days, by first-order experience

What this means:

- Only 3.1% of customers order again within 6 months.
- After a late first order it is 2.7% (3,673 customers) vs 3.1% after an on-time one (51,592). The gap is small and not statistically significant.
- Delivery fixes will protect ratings but shouldn't be expected to lift repeat purchases much. Test retention ideas separately.

Recommendations, in priority order

Priority	Recommendation	Evidence	Confidence
1	Escalate carrier performance on RJ and northeast routes (MA, CE, BA)	RJ holds 22.9% of all late orders; MA, CE and BA run 12-17% late vs 4.5% in SP; 87% of the extra delay on late orders is carrier transit; late orders account for up to 28% of low ratings	Act now, then request carrier-level data
2	Monitor monthly late % and carrier transit days, with an alert (for example late % above 8%)	Late % spiked to 12-19% in Nov 2017 and Feb-Mar 2018 while seller handling time stayed flat	Act now, low cost
3	Agree extra carrier capacity before the November peak	Nov 2017 volume jumped 63% month on month and late % hit 12.4%	Test: only one peak observed
4	Message customers early when an order passes its promised date, and escalate at 4+ days late	Average rating falls from 4.29 to 3.29 at 1-3 days late and to 2.10 at 4-7 days late	Test with a pilot
5	Investigate quality and listing accuracy in office furniture, bed/bath/table and furniture/decor	18-25% low ratings, with late rates (7-8%) close to the 6.8% average	Investigate: review text not analysed
6	Review the 21 flagged sellers	They handle 1.8% of orders but cause 4.9% of low-rated orders	Act now, small lever
7	Test retention levers separately from delivery fixes	Repeat rate is about 3% whatever the first experience (3.1% vs 2.7%, small samples)	Test: delivery fixes alone will not lift it
